

Old Gravity

The start of the Universe is not stable, it should ball up.
There is no reason matter should move at the same speed.

History

1980 Guth Explain lack of magnetic monopoles.

1982 Linde A scalar field does the work.

Current Efforts

Inflation - magic to make Universe briefly grow like crazy

My Effort

Don't use Newton out-of-the-box, things are moving
Need a stable, constant velocity solution for gravity.
